

Alex Morgan

Data Engineer | Python, SQL, ETL/ELT | Toulouse

Email: alex.morgan@example.test | Phone: +33 1 00 00 00 00 | LinkedIn: example.test/alex

Profile

Data engineer with two years of experience delivering reliable cloud data pipelines, automated quality controls and operational analytics. Builds maintainable Python, SQL, Airflow, BigQuery and dbt solutions, translating stakeholder requirements into governed datasets, reporting products and decision-ready findings.

Experience

Northwind Energy - Data Engineer

2024 - 2026

- Built and operated Python, SQL and Airflow ETL pipelines integrating operational data into BigQuery.
- Developed maintainable dbt transformation models with automated data-quality controls and monitoring for daily datasets.
- Partnered with operations and finance teams to define KPIs and deliver stakeholder-facing Looker reporting products.

UrbanFlow Analytics - Data Analyst Intern

2023 - 2024

- Prepared reusable SQL datasets and pandas analyses for mobility and service-quality reporting.
- Translated stakeholder questions into documented metrics, dashboards and validation checks for decision-ready reporting.

Projects

Data quality observability | *dbt, Great Expectations, BigQuery, GitHub Actions*

- Automated freshness, schema and business-rule checks with CI reporting and traceable failure diagnostics.
- Defined dataset ownership and alerting conventions, enabling investigation of incidents from source datasets to dashboard outputs.

Real-time mobility data platform | *Python, Kafka, Spark, Docker*

- Designed a streaming pipeline in Python, Kafka and Spark to validate, transform and aggregate transport events for operational analytics.
- Added replayable integration tests, event-quality metrics and containerised local environments for reliable, maintainable delivery.

Energy demand forecasting | *Python, pandas, scikit-learn, MLflow*

- Built a time-series training workflow for electricity-demand data with feature engineering, MLflow experiment tracking and reproducible error analysis.
- Compared seasonal baselines with tree-based models and documented failure modes to produce decision-ready findings for operations planning.

Skills

Data Engineering: Python, SQL, ETL/ELT, Airflow, Spark, Kafka

Data Modelling & Cloud: dbt, data modelling, BigQuery, GCP, Cloud Storage

Analytics & Visualisation: pandas, Looker, scikit-learn, MLflow

Delivery & Quality: Great Expectations, GitHub Actions, CI/CD, Docker, Git

Education

Southwest Institute of Technology - Engineering degree, Data major

2021 - 2026

- Statistics, machine learning, databases, distributed systems and cloud architecture.

Technical University of Valencia - International semester

2024

- Data platforms, software engineering and project management.
