

Alex Morgan

Data Engineer | Python, Spark, Kafka, GCP | Toulouse

Email: alex.morgan@example.test | Phone: +33 1 00 00 00 00 | LinkedIn: example.test/alex

Profile

Data engineer with two years of experience building reliable cloud and distributed data pipelines with Python, SQL, Airflow, GCP, Spark and Kafka. Delivers maintainable batch and streaming workflows, automated data-quality controls and governed data foundations for dependable analytics and downstream consumption, working closely with technical and business stakeholders.

Experience

Northwind Energy - Data Engineer

2024 - 2026

- Built and operated Python, SQL and Airflow pipelines integrating operational data into BigQuery on GCP.
- Developed dbt transformation models with automated data-quality controls and monitoring for reliable daily datasets.
- Partnered with operations and finance teams to define KPIs and deliver Looker reporting products.

UrbanFlow Analytics - Data Analyst Intern

2023 - 2024

- Prepared reusable SQL datasets and pandas analyses for mobility and service-quality reporting.
- Translated stakeholder questions into documented metrics, dashboards and validation checks.

Projects

Real-time mobility data platform | Python, Kafka, Spark, Docker

- Designed a distributed streaming pipeline with Kafka and Spark to validate, aggregate and expose transport events for operational analytics.
- Added replayable integration tests, event-quality metrics and containerized environments to support reliable greenfield delivery.

Data quality observability | dbt, Great Expectations, BigQuery, GitHub Actions

- Automated freshness, schema and business-rule controls with CI reporting and traceable diagnostics for datasets stored in BigQuery.
- Defined dataset ownership and alerting conventions, creating governed and dependable data foundations for analytics and downstream consumption.

Energy demand forecasting | Python, pandas, scikit-learn, MLflow

- Built a reproducible time-series workflow for electricity-demand data, covering feature engineering, model training and MLflow experiment tracking.
- Compared seasonal baselines with tree-based models and documented data and prediction failure modes for dependable operations planning.

Skills

Data Engineering: Python, SQL, Spark, Kafka, ETL/ELT

Cloud & Orchestration: GCP, BigQuery, Cloud Storage, Airflow, Docker

Quality & Governance: dbt, Great Expectations, data modelling, data quality & observability

Delivery & Analytics: pandas, Git, GitHub Actions, CI/CD, Looker

Education

Southwest Institute of Technology - Engineering degree, Data major

2021 - 2026

- Statistics, machine learning, databases, distributed systems and cloud architecture.

Technical University of Valencia - International semester

2024

- Data platforms, software engineering and project management.
