

Dear hiring team,

I am applying for the Regulatory Affairs Specialist position because its focus on lifecycle compliance across a European medical-device portfolio closely reflects the work in which I can contribute most effectively. Over three years in medical-device compliance, I have developed experience spanning regulatory affairs and quality assurance, with a consistent emphasis on rigorous, traceable documentation.

At MedNova Devices, I prepared and maintained EU MDR technical documentation for Class II devices, including change-impact assessments and submission-readiness reviews. I also coordinated evidence across quality, clinical and engineering teams and tracked notified-body questions through closure. This experience would enable me to support Medica Europe's submissions, assess changes and keep documentation aligned across the functions involved.

I would also bring a lifecycle perspective to the role through my work on clinical-evaluation updates, post-market surveillance, vigilance and risk-management documentation. The opportunity to connect these activities with Quality, Clinical, Product Development and Manufacturing particularly interests me, as effective regulatory work depends on turning specialist input into clear, controlled and traceable evidence.

Kind regards,
Sofia Martin
